

Interested in adding a quick mapping functionality to your SageCRM database? We have a solution...

Effective Solutions can customize your SageCRM address block to include a "Street-Map" link. CRM users can simply click on the Street-Map link from a Company or person record to quickly pull up the address on a map.

Notice in the example below that the Street-Map is a hyperlink that you can click on.

When you click on the Street-Map link, it pulls up the address on a map in a separate window.
